

Philip Perszyk of East Glacier, resident of the community for the neighborhood 50 years and I seriously oppose the legislation that has been proposed to allow the random killing of grizzly bears by people who are ranching on public lands. I've been around when the bear was almost gone and the near human understanding of this is so limited and yet you people, Fish Wildlife & Parks (what a joke that is) are proposing to adopt something that will allow willy nilly a rancher to go out and plug a grizzly bear because it's too far into the wilderness which is still within the confines of state lands. There is something morally wrong with all of this. The state of Montana is about twice as big for employment. 70-80 thousand people work in the tourist industry. The billions of dollars that come from tourism is twice what agriculture produces. Let's get real here for a minute, you guys have a California governor named Gianforte, who could care less about the great beauty of this state. So anyway, that's my comment. You probably won't use it.

I'm disgusted with you people, totally disgusted and I have fought for the rights of our wildlife as well as the protection of our public lands for well over 50 years in Montana and it sickens me, what you people are up to.
